ANNOUNCEMENT: Protégé-OWL Short Course being offered

A Protégé-OWL Short Course will be held at Stanford University from March 23rd-25th, 2009. The course will provide an introduction to ontology development in OWL, both from a theoretical standpoint and from a practical standpoint through hands-on use of the Protégé platform. The course also emphasizes how to use OWL ontologies, and other semantic technologies like SWRL, to build semantic applications with examples from real-world use cases. More details about course content, as well as a complete course schedule are available online at the following links:

http://protege.stanford.edu/shortcourse/protege-owl/200903/content.html

http://protege.stanford.edu/shortcourse/protege-owl/200903/schedule.html

The course is especially geared toward beginner and intermediate users of Protégé-OWL, but everyone is welcome to register. Online registration is available on the course Web site: http://protege.stanford.edu/shortcourse/protege-owl/200903/register.html

The course will be taught by members of the Protégé staff and enrollment is limited to ensure optimal learning experiences. We are currently offering a 10% discount for groups of five or more people from the same organization. Please contact the course organizers if you have additional questions about the short course: protege-shortcourse@lists.stanford.edu.

Protégé software is currently transitioning from the current version (Protégé 3) to an entirely new release (Protégé 4). Protégé 3 is widely used and the adoption of Protégé 4 is slowing happening, because of this, you will find resources for both versions.

A video demo of Protégé 3 is available for you to learn more about this tool. Please review and if you have questions - visit the Protégé forums or send us an email.
